

# Highly flexible production system

The Interglass production system is the backbone that enables the successful delivery of our commercial SmartTouch methodology.

It has been designed for high-mix / low volume operations and it enables us to manufacture more than 600 products per year.

The manufacturing team work in collaboration with the R&D teams in order to assure the scalability of the formulas. Batch-sizes can run from 1 kg up to 6,000 kg, maintaining the highest levels of quality.

# Interglass around the world
