

Intelligent route planning and delivery

The A+W Logistics Optimizer creates and optimises the shortest routes – taking into consideration your real fleet and the order data transmitted. The system will tell you – taking into consideration route limitations (e.g. bridge height or permissible vehicle weight) and traffic information – the optimal route with the optimal sequence of delivery points. Deviating delivery addresses are also considered, as are specific time and date promises made to your customers. The weight to be delivered is distributed across the lorries so that each delivery station must be visited just once – and so the most appropriate lorry is always selected for the route.

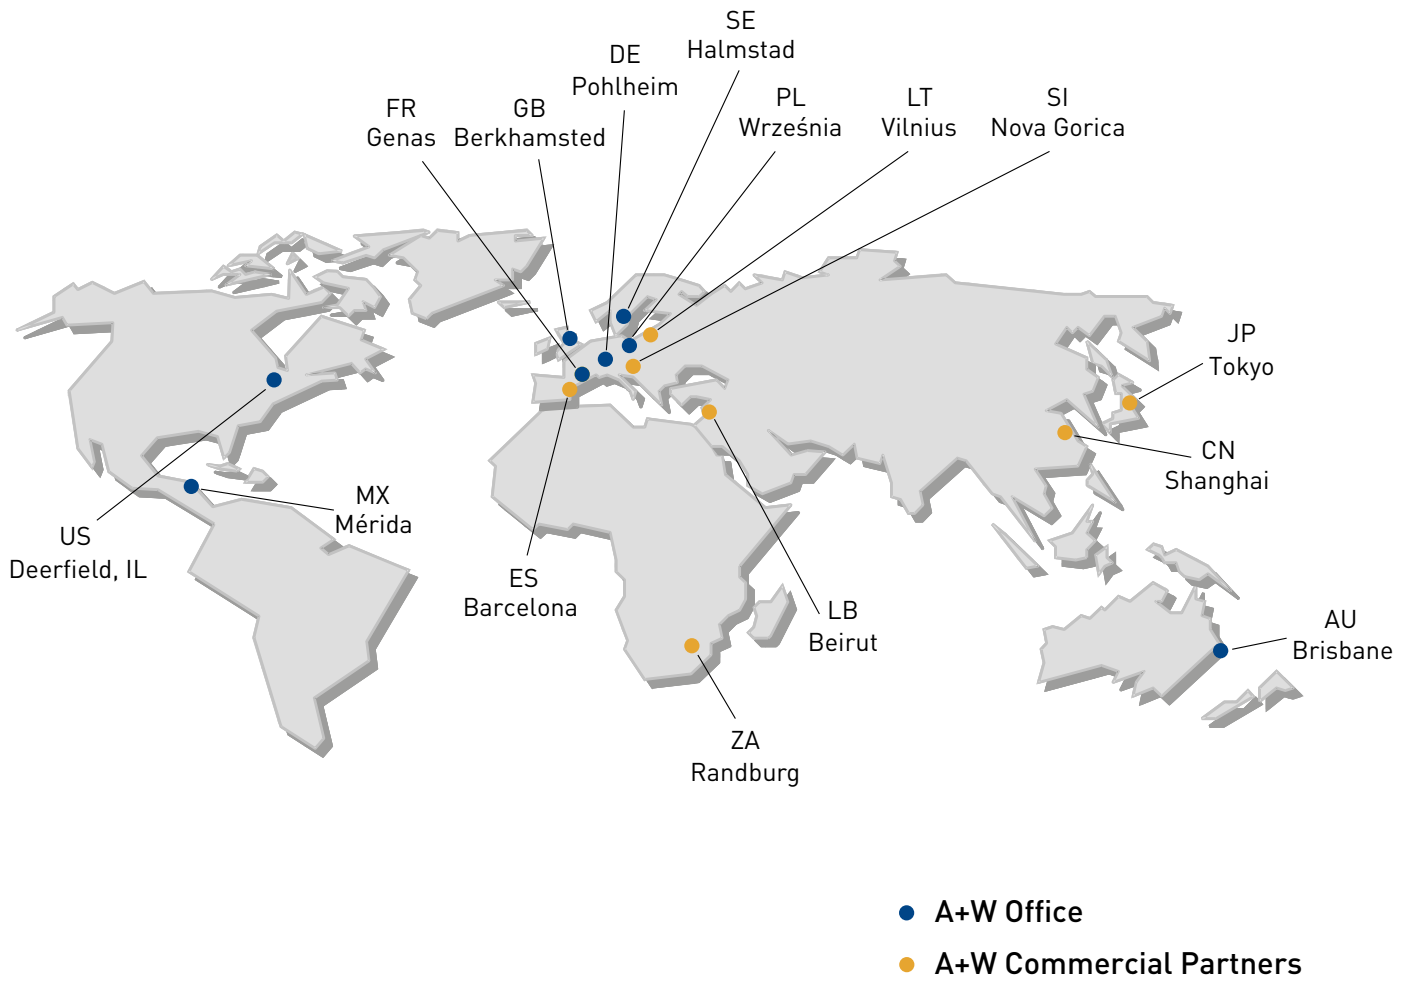

On the one hand, our solution offers you the opportunity to plan quickly and easily; on the other hand, to find the best delivery result using different options and parameters. The planned costs are calculated

for the routes (time, personnel, fuel, tolls), and these can be compared to the actual costs after successful delivery. The system offers you a comprehensive statistics and analysis tool for this.

But the A+W Logistics Optimizer does not just assist with route planning and evaluation, it also assists with the delivery itself. Thus on the one hand you can export the route data to the navigation system; on the other hand, you can use a delivery app on a mobile phone to book the delivery and report it back to the office in real time. There, the despatch manager can monitor the delivery of the route online and react directly to reports such as "Sheet 0815 broken". The system also supports the delivery and pick-up of additional racks and it can thus be integrated completely into route optimisation.

Your benefits:

- At the right time and at the right unloading station by specifying defined loading and unloading times
- Integration into existing navigation systems (TomTom or Garmin) and own delivery app
- Improved customer delivery management thanks to intelligent route monitoring, analysis, and statistical analyses
- Incorporation of the delivery into the entire commercial process thanks to status reports and the printing of delivery notes, reports, and lists in the correct sequence – attuned to the optimised route

A+W – over 40 years of global market leadership in software for the flat-glass, windows and doors industry – for small, medium-sized and enterprise companies.

Our long-term experience is your benefit.
